Dear Hiring Manager or Recruiting Professional,

I'm excited to be applying for the Software Engineer position at your company. As someone who is highly focused and attentive to detail, I thrive on building quality systems and code that will surpass your end users' expectations. I'm thrilled at the opportunity to utilize my new skills from the University of Denver's Full Stack Coding Bootcamp that I have been deeply engaged in.

My initial experience lies in Hardware and Server Engineering, but I have a growth mindset and recently I knew it was time to learn about software and become even more well-rounded in technology. During my Bootcamp I was tasked with creating innovative solutions for multiple group projects and individual tasks. As a natural leader, I led the development in our group projects. As a team we created multiple webpages, utilized API's, QA tested and worked in an Agile format. I can really appreciate the iterative approach to software development.

I have a passion for taking old processes and moving them to a digital format. I thrive in an environment that allows creative thinking and process improvement. When faced with deadlines, I will work hard to ensure our code is up to speed without sacrificing quality.

Thank you for your time and consideration. I'm looking forward to hearing more details on the position and your company. I'm also excited about the opportunity to leverage my unique skills and eager to demonstrate my commitment to developing world-class software!

Sincerely,

Jared Sutch
